

na10

For those who care about pure air.

Ideal for

- > Boats
- > First responder units
- > Transportation vehicles
- > Trains
- > Hospital Rooms

The NA10 is unlike any other air purification system on the market today. Its unparalleled power comes from combining UV light with TiO_2 , resulting in the elimination of harmful airborne contaminants. Our newly engineered blades help create turbulence so that more air makes

contact with our treated services. Our design-specific blades do not require replacement. They are simply wiped clean during the annual bulb change. If you'd like to feel healthier and breathe easier, the NA10 is for you.

specifications

PolarClear™ technology

Third-party green-certified TiO_2
UV bulb with chamber to process air
No ozone or off gassing produced
Made to fit existing duct work

Combining UV Light and TiO_2 , the NA10 creates a photocatalytic reaction that creates a powerful burst of hydroxyl radicals. These hydroxyl radicals attack harmful airborne microorganisms breaking down their cell wall until there is nothing left but trace amounts of water and carbon dioxide.

Structure

Aluminum structure
Aluminum hardware
Dimensions: 16" L x 8" H
Weight: 4 lbs
Interior of box coated with TiO_2
Exterior of box wrapped in marine insulation
LED Indicator Light shows that unit is in operation
Newly engineered fixed fan blades create more turbulence and contact time with UV & TiO_2

Electrical

1 UL tested ballast 120V/230V, 40 Watts Max
Input 120V AC, 60Hz, .33A, 230V AC, 50Hz, .20A
1 UV Bulb, 11 Watts
1 LED Indicator Light, 0.045 Watts
9' Electrical Cord

Made in the USA

nautic air.
